
We have been frequently asked by practitioners to provide a course on the basics of tooth preparation for conventional and resin-bonded bridges.

As a group, Prosthodontic Associates, has decided to offer a very limited attendance program.

BIRDGE - FIXED PARTIAL DENTURE

A tooth-borne bridge requires the application of dental anatomy, physiology, dental materials and clinical technique to achieve a predictable long term outcome.

We will provide a comprehensive didactic and hands-on program to clarify what we believe to be the most important criteria for success.

We anticipate a challenging but, rewarding two days in a pleasant clinical laboratory environment.

TWO DAY HANDS-ON WORKSHOP

Prosthodontic Associates (Gordon Burt, Kunal Pandya & Philip Yeung) with Gerard Clausen, are pleased to offer a course, tailored to the general dental practitioner in the finer points of treatment planning and execution of fixed partial dentures. Our emphasis will be on a hands-on experience, with four experienced clinicians to mentor a very limited group of attendees. We will take you through tooth preparation for three-unit and resin-bonded bridges. The idiosyncrasies of different material choices will be discussed and there will be an opportunity to anonymously critique preparations using digital scans.

The program will include didactic presentations and demonstrations, covering treatment from planning to delivery. Where possible, demonstrations and hand-on exercises will be employed to show evidence-based techniques, employed in our everyday practice.

Places are **strictly limited**.

13.5 hours Scientific CPD, including 6.50 hours hands-on

Lunch and refreshments provided

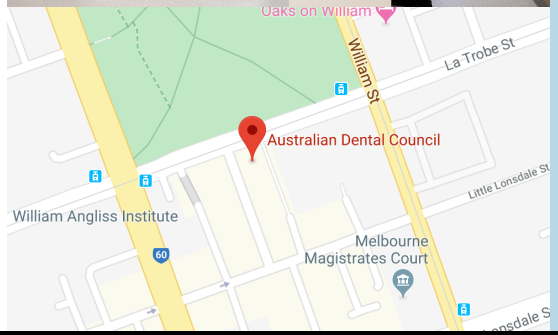
- Call: **03 9654 5079** to register
- Please inform us of any dietary requirements
- Registration 8am, **commencing 8.30am sharp**

The ADC is located in central Melbourne. We recommend using public transport, although parking in various sites, nearby is available. We strongly suggest bringing magnification (loupes). We will, however, provide all necessary instrumentation, materials and models.

Please note, this event is not a preparation course for ADC examinations


A detailed timetable will be sent to delegates prior to the course. Places are strictly limited.
